

## A VERSATILE RANGE OF TOP QUALITY CLOTHS

This label warrants your quality

### A UNIQUE LABEL

Fibercon sailcloth is woven with our exclusive Fibercon high tenacity yarn.

### WHY DO WE SPIN OUR OWN POLYESTER HIGH TENACITY YARN?

The production of polyester fibers has increasingly been outsourced to low cost countries where spinning companies no longer produce fibers to the quality and specifications necessary for weaving superior sailcloth. The trading name of these fibers has remained the same but the actual performance of the fibers has degraded dramatically. As the leader in premium woven sailcloth, Contender has always realised that the fiber used in our cloth is as important as the weave and finish. We have always been in control of the weave and finish and now we have taken control over the quality of the fiber as well.

### HIGH TENACITY YARN

High tenacity means high breaking strength and low stretch.

### UV RESISTANT YARN

UV radiation from sunlight can break down polyester fibers. We added UV blockers to the Fibercon polymer so when you select Fibercon sailcloth you are getting the highest UV resistance available in any sailcloth.

### FIBERCON YARN AVAILABLE IN A WIDE RANGE OF SIZES

The selection of fibers for their size is an important aspect of determining the sailcloth's properties relative to weight and balance. Fibercon fibers are spun in a wide range of sizes engineered to construct a complete series of premium styles.

Woven in different countries of the European Union, finished at Contender Finishing GmbH

## FIBERCON® COMPETITION POLYKOTE

Cloth for top performance

➔ *Designed for all One Design classes, from club to Olympic level*

Racing dinghy and One Design keelboat sailors have always pushed their sails to the limit and Fibercon® Competition gives them what they need for competition, from club level right through to Olympic and World Championship regattas. Fibercon® Competition is the most successful sailcloth available for this type of racing.

The key for this type of sailing is our super stable Polykote finish, combined with precise weaving of the unique Fibercon fibers.

The Polykote finish is a polyurethane coating, developed especially by Contender, which provides a hard layer to stabilise the weave and create a connection between the yarns. This ensures the very high stability of the cloth but still allows the sail to be trimmed to a wide range of conditions on a modern racing rig.
